

Hi! Geoff, just a follow-up from the Bioclean installation

We have seen a significant difference in the cleanliness of our anilox rolls in all our machines. Because we are a site that does a lot of process prints the cleanliness of our anilox are critical. Prior to the install of the Bioclean we were soda blasting our rolls very frequently and changing out rolls as well.

Since the system install we have not soda blasted or replaced an anilox roll. We have also seen an improvement of the ink pumps and trays.

Regards
